

SVArquitectura
SANTIAGO VIVES

> Concept + Philosophy

Knowledge

Each project enables us to enhance experience and to deepen our insight into specific work fields (museums, schools, housing...), whereas it opens ways for new approaches to contemporary solutions.

Quality

The work responds to the requirement for overall quality: urban integration, ways to work constructive materials, evolution of the client's program into formal expression, budgetary control and environmental sustainability.

Efficiency

The optimization of resources, time and expenses are the basis of the work of a multidisciplinary team serving the client's requests. Architects, engineers, museographers, landscape architects, surveyors... we all work toward this common goal.

Innovation

The changing reality often compels us to find innovative solutions for each new challenge, either constructive or planning.

Responsibility

The commitment with the client as well as with the natural and the social environment requires working with a high sense of responsibility to give viability to each project. The purpose of the project and the user's demands are the focus of our proposals

Singularity

There is no repetition of formulas: every project requires that we adapt to specific demands and find the appropriate, custom-made answers. That's how we single out each assignment and provide it with uniqueness.

Control

The determination of optimal solutions is always accompanied by strict budgetary control where the viability is reflected by the exact documentation of the costs generated by each solution during the life-cycle from investment to maintenance and recycling.

Communication

Ongoing dialogue and coordination are vital for the development of precise objectives and their proper conceptualization as well as for the responsible management of the planning and construction-processes.

Experience

A hundred new building-projects and extensive experience in the field of restoration and refurbishment give evidence of our expertise.

Recognition

Many projects, built works and interventions in the urban heritage have won awards and have been disseminated in publications and exhibitions on local and international level.

> Studio + Biography

v COAC

v SV□ Studio in Barcelona

SV□arquitectura represents the core of a network of multidisciplinary professionals and companies with extensive experience in cooperation, which unfolds on the basis of specifically established working groups.

This flexible structure enables us to face large and complex projects by adapting the profile and capacity of the team to the characteristics of each project.

We coordinate during the whole process in close contact with our partners and highly qualified specialists the advance of the projects to ensure an integral service and optimal product quality.

Santiago Vives Sanfeliu, graduated as architect at the Technical College of Architecture of Barcelona (ETSAB 1973). Research fellowship from the Education and Culture Ministry for the work Association and housing access .

During the years 1977-1998 he joined the Office Bosch-Tarrús-Vives arquitectes.

In 1998 he founded the office SV□arquitectura. Simultaneously, from 1975 he has been teaching as professor of design and coordinates the students exchange-program Sòcrates at the ETSAB and other universities in Washington, Paris, Thessaloniki, Torino, Firenze and Ferrara.

He has participated in many research projects carrying out several conferences as well as lectures in Spain and abroad.
